## OUTDOORS +

## SUNDAY, AUGUST 12, 2018 B1

The terrain can be treacherous at times and can take a heavy toll on your body. Getting in shape first is an important step to a successful trip. (Special to the Montrose Daily Press/ Mark Rackay)

## Shape up for the hunt

My hunting ordeal ends on the last day of the hunting season at one-half hour after sunset, and begins again the next morning one-half

Tips from the Posse By Mark Rackay

hour before sunrise. I guess you can say I am obsessed with hunting.

The truth is, preparing for an upcoming trip can be more exciting and fun that the actual trip. Well, maybe not as much fun, but it is a big part of the trip.

If you are like me, you will spend a great deal of time going over your equipment. Your bow is dialed in to perfection and you have practiced faithfully, every day, for months. The rifle is sighted in perfectly, boots are oiled, and the tent has been repaired. All is right with the world for opening day.

Did you remember to prepare, in case Mr. Murphy decides to visit you on the hunt? We may be able to fool that old bag, Mother Nature, but you will never get one past Murph, so don't even try. Better to prepare for his visit and be as ready as possible. The Mountain Rescue Association estimates that 3,000 rescue missions will be conducted annually in the Rocky Mountains. Of those, 200 people will lose their lives. Our own team here in Montrose, the sheriff's posse, conducts an average of six missions per season. now days are treatable with medications and best to have a good supply of any needed prescriptions when you take the trip. It helps to have a doc who is also into the outdoors because he will understand best what conditions you will be facing.

Spend as much time over the summer getting into the best physical shape you can. Hunting in the high country can be very physically demanding. All of your walking will be uphill, downhill or side-hill as there is really no level ground in the mountains. Throw in a bunch of deadfalls, rocks and chuckholes and you have the full Monte of a workout.

Taking a power walk every day is a good start. Begin slowly, increasing your distance and speed every day. After a couple weeks, start wearing your pack with some weights in it. Again, slowly begin increasing the weight you carry. When you get here, think about how much equipment you will be carrying around with you and try to prepare for that weight load.

I bought an exercise backpack that came with a good selection of weights. As I increase my workouts, I simply add more weight to the pack. When I use the treadmill, I increase the uphill setting at the same time. This closely simulates walking uphill with a pack during the season. It also gives me an opportunity to practice my impression of an old man desperately out of breath. Wear the boots you will be using while on the hunt when you walk the dog, or take a stroll in the neighborhood. This is what you will be wearing when you get here and it helps condition your leg muscles to those boots. It will also serve to help break in any new footwear before the trip. I would not wear them for my workout because of a whole score of foot and leg ailments you can get from not having proper support for running or cross training. Eating right and getting the proper amount of sleep is always important. Since we're preparing ourselves, we might try and shed any extra pounds that we may be lugging around. I hate that word diet so maybe we can call it eating smarter, or in my case, eating less. I love food and I eat way too much "healthy food."

You will be at high altitudes and carrying a load while on your hunt. Be certain your body is up to the task. (Special to the Montrose Daily Press/ Mark Rackay)

will only be 33 percent of the oxygen available at sea level. That means your body will only be able to function at 86 percent of its physical capabilities. All those statistics mean that you are going to tire quicker, and feel like you are sucking air from the rafters. Any hunters who are coming from lower altitudes, you will want to give your body some time to acclimate, and avoid altitude sickness. Altitude sickness can cause nausea, vomiting, headache, shortness of breath, weakness, mental confusion and a score of other symptoms. The cure for altitude sickness is to descend in altitude as quickly as possible. Bring them down several thousand feet in altitude and get them to a medical facility to be checked out. Many times, the symptoms disappear just as quickly as they appear. I have seen victims near unconscious when I arrived, who were alert, talking, and near normal, a short time after we began our descent. If not treated, it could lead to death and the cancelation of all your life memberships. You definitely don't want a one-way ticket west so take your time when you are here, and don't ignore the symptoms. Spend a few days here getting acclimated in Montrose, before you head up the hill. Take a few walks each day, nothing

vigorous, and drink plenty of water. The water will also help with the dry climate we have. Sports drinks with electrolytes are good as well, especially if you are perspiring. Avoid alcohol and drinks containing caffeine.

Many of these rescues could have been avoided if the person would have spent sometime preparing for the trip, instead of just showing up. I am not talking about your hunt pack and survival gear, I am referring to your body.

Did you remember to get your body ready for the big trip? After all, your body is going to put up with all the punishments and abuses of the hunt. A little work on your physical condition may help keep Murphy in his own camp this year.

A good start would be a visit with the family sawbones. Make sure you don't have any medical condition that could cause you problems. Most conditions

Remember that you will be dealing with altitude on your hunt. If your camp is going to be at 9,000-feet altitude, there After a couple days here in town, it is safer to move on up in altitude to your camp or lodge. Once there, take it easy at the start. Give your body a little time again to get used to another hike in altitude. A good 24 hours of avoiding strenuous activity and the same rules of avoiding the caffeine and booze still apply. Continue drinking plenty of water throughout your hunt, even if you do not feel thirsty.

Getting your body in shape for the hunt will increase your chances of success and overall enjoyment of the trip. You can't keep Murphy away, but hopefully, you can minimize his presence. We want to see you hunting here every year, so go home with a trophy, and not in an aromatic pine box. In the meantime, I have to start packing; season is just around the corner.
